==========

SYSTEM ANALYSIS & DESIGN DOCUMENTATION

==========

Project Name: Meeting Room Booking System (MRBS)

Course: System Analysis and Design

---

1. SYSTEM REQUEST

Project Sponsor:

Head of Administration / Operations Department

Business Need:

The organization aims to streamline and automate the process of booking meeting rooms to avoid scheduling conflicts and double-bookings. Currently, significant staff time is wasted due to unorganized room usage and manual booking procedures (emails, paper logs, or spreadsheets).

Business Requirements:

• Room Exploration: Ability to view available rooms along with their specifications (capacity, displays, sound systems, etc.).

• Booking Management: Capability to reserve rooms, set date and time, and specify the number of attendees.

• Automated Notifications: Real-time notifications for confirmation, modifications, or cancellations.

• Administrative Control: Admin interface to manage room details, set usage policies, and handle user permissions.

• Overbooking Prevention: Automated scheduling system to prevent overlapping reservations.

Business Value:

• Tangible Value: Reduces time spent on booking coordination by 40%, increases room utilization efficiency, and eliminates manual paperwork.

• Intangible Value: Improves employee satisfaction, minimizes workplace conflicts regarding room availability, and promotes a professional corporate environment.

Special Issues / Constraints:

• Cross-platform compatibility (accessible via Web and Mobile browsers).

• Role-based access control to ensure data security and proper authorization.

---

2. FEASIBILITY STUDY

A. Technical Feasibility

• Risk Level: Low to Medium.

• Familiarity with Application: High. Meeting room reservation systems are well-understood and widely implemented across corporate settings.

• Familiarity with Technology: High. Standard web development stacks (HTML/CSS/JS, Backend Frameworks, and Relational Databases) are readily available and manageable for the team.

B. Economic Feasibility

(Refer to the attached Excel spreadsheet 'Feasibility_Study_MRBS.xlsx' for detailed cost-benefit breakdowns.)

C. Organizational Feasibility

• Strategic Alignment: Aligns directly with the organization's digital transformation strategy and operational efficiency goals.

• User Acceptance: High. An intuitive user interface will ensure smooth adoption by staff over legacy manual methods.
